

## **IN THE CLAIMS**

This listing of the claim will replace all prior versions and listings of claim in the present application.

### **Listing of Claims**

Claims 1-5 (canceled).

6. (new) A method of controlling a program, comprising:

inputting a request including a component judgment condition which is used to determine a component kind;

acquiring a component kind by referring to a component kind list based on the input component judgment condition and an interface name previously held, said component kind list having correspondence among the interface name, the component kind and the component judgment condition;

acquiring component referring information by referring to a component referring information list based on the interface name and the acquired component kind; and

outputting the acquired component referring information to be used in controlling the program.

7. (new) A program control system, comprising:

a first part for inputting a request including a component judgment condition which is used to determine a component kind;

a second part for acquiring a component kind by referring to a component kind list based on the input component judgment condition and an interface name

previously held, said component kind list having correspondence among the interface name, the component kind and the component judgment condition;

a third part for acquiring component referring information by referring to a component referring information list based on the interface name and the acquired component kind; and

a fourth part for outputting the acquired component referring information to be used in the control performed by the program control system.
